FlipBook - Lightweight Non-JQuery Plugin

FlipBook is a plugin built on javascript which allows users to animate a book with flippable pages. This plugin doesn't depend on any other libraries and this doesn't use JQuery. This would cut a significant download time as this is built 100% using plain vanilla javascript.

Features

- Lightweight, no additional javascript dependency.
- Easy installation.
- Can make the pages call for attention.
- Easy navigation with arrow keys.
- Can jump to a specific page.

Browser Compatibility

- Chrome
- Firefox
- Safari
- Opera

Getting Started

1. Include stylesheet in head tag:

```
<head>
…
<link rel="stylesheet" href="flipbook.min.css">
…
</head>
```

2. Include script in body tag:

```
<head>
…
<script src="flipbook.min.js"></script>
…
</head>
```

3. Create your book skeleton like this:

```
<div class="c-flipbook" id="FlipBook">
    <div class="c-flipbook__page">
    </div>
    <div class="c-flipbook__page">
    </div>
    …
    <div class="c-flipbook__page">
    </div>
</div>
```

4. Add 1 line of javascript to initialize:

```
<script>
    new FlipBook('element-id');
</script>
```

Options

Here are the options available. You can set it inside the init script for general settings.

```
<script>
    new FlipBook('element-id', { // ID of element
        nextButton: document.getElementById(''), // next button element
        previousButton: document.getElementById(''), // previous button element
        canClose: false, // book can close on its cover
        arrowKeys: true, // can be navigated with arrow keys
        initialActivePage: 0, // index of initial page that is opened
        onPageTurn: function () {}, // callback after page is turned
        initialCall: false, // should the book page calls for attention
        width: '800px', // define width
        height: '300px', // define height
    });
</script>
```
